Abinash Varadhan

Senior DevOps Engineer | Cloud, Kubernetes & Platform Reliability

abinash@devopsminds.io Madurai, India github.com/abinashvaradhan

CORE SKILLS

CLOUD
AWS, GCP, Azure

INFRASTRUCTURE AS CODE
Terraform, Terragrunt, CloudFormation

CONFIGURATION MGMT
Ansible, Packer, Helm, Kustomize, JCasC

CONTAINERS & ORCHESTRATION
Kubernetes, EKS, GKE, ECS, Docker, Docker Compose

CI/CD & GITOPS
Jenkins, GitHub Actions, GitLab CI, Argo CD, AWS CodePipeline

API PLATFORMS
Kong API Gateway, OpenAPI (OAS)

OBSERVABILITY
New Relic, Prometheus, Grafana, ELK, CloudWatch, Cloud Logging, Opsgenie

SECURITY & COMPLIANCE
CrowdStrike Falcon, Tanium, Snyk, Trivy, SonarQube, Xray, Kyverno, AWS Config, Security Hub, AWS WAF

BACKUP & DR
AWS Backup, Velero, Restic

ARTIFACT MANAGEMENT
JFrog, Amazon ECR, Docker Hub, Google Artifact Registry

SCRIPTING
Bash, Python, Boto3, YAML

KEY ACHIEVEMENTS

300+ APIs onboarded
Architected and operated a centralized Kong API Gateway platform serving 20+ teams.

~70% faster onboarding
Spec-driven Jenkins pipelines removed manual gateway configuration.

99.99%+ availability
Owned Tier-1 shared services for a global publishing leader.

PROFESSIONAL SUMMARY

Senior DevOps Engineer with 9+ years of experience designing, securing and operating cloud platforms on AWS and GCP. Proven record of running Tier-1, high-traffic systems with 99.99%+ availability, standardizing CI/CD, and delivering compliant, cost-efficient infrastructure as code. Builds platforms that scale, recover predictably and let development teams ship faster, with deep expertise in Kubernetes, API gateways, observability, disaster recovery and regulated-environment security.

WORK EXPERIENCE

Senior DevOps Engineer

July 2023 - April 2026 · Bengaluru, India

- **Tier-1 service ownership:** owned and scaled shared services for a global scientific, technical and medical publisher, supporting millions of users worldwide with 99.99%+ availability.
- **API gateway platform:** architected and operated a centralized Kong platform (control plane on AWS EKS, data plane on ECS Fargate); onboarded and migrated 300+ APIs for 20+ teams, sustaining 8K-12K RPS across environments.
- **CI/CD standardization:** built OpenAPI-driven Jenkins pipelines automating API onboarding, validation, versioning, authentication, rate limiting and policy enforcement, cutting onboarding time by ~70%.
- **Multi-account AWS architecture:** designed networking for secure cross-account and cross-VPC traffic using Transit Gateway, centralized routing, Cloudflare DNS and Route 53, including region-aware and blue/green DNS deployments.
- **Infrastructure as Code:** delivered EKS, ECS, Kong and networking with Terraform and GitHub Actions, keeping dev, staging and production consistent with minimal drift.
- **Observability:** built a Golden Signals platform with New Relic APM, Synthetics, logs and distributed tracing, with automated Opsgenie alerting.
- **Resilience & DR:** led DR exercises and end-to-end recovery plans against RTO/RPO targets; automated Tier-1 failover with CloudWatch alarms and Route 53 health checks.
- **Compliance & security:** enforced HIPAA-aligned baselines through infrastructure policy, backup and DR strategy, centralized audit logging, and Kyverno policy enforcement on Kubernetes.

DevOps Engineer

November 2021 - July 2023 · Madurai, India

- **Disaster recovery:** implemented and tested DR with Terraform to guarantee business continuity and rapid recovery readiness.
- **Security & compliance:** aligned environments with CFR-11 and Annex EU11 requirements using AWS Config and Security Hub.
- **CI/CD governance:** built pipelines on AWS CodePipeline and GitHub Actions with manual approval gates, improving deployment control and speed.
- **Cost optimization:** cut operating costs by 30% by right-sizing EC2, RDS and OpenSearch with Trusted Advisor.

30% cost reduction
Right-sizing and Reserved Instances / Savings Plans across roles.

Disaster recovery
Led DR design and drills against RTO/RPO targets.

ALSO SKILLED IN

Linux administration, cost optimization, AI-assisted engineering (Amazon Q, Cursor, Kiro)

EDUCATION

B.E., Electronics & Communication Engineering
Government College of Technology
2012 - 2016

- **Monitoring:** used CloudWatch for proactive alerting on EC2 performance, Lambda errors, API Gateway usage and AWS Backup status.

Senior Systems Engineer

January 2021 - November 2021 · Pollachi, India

- **Release strategy:** introduced canary deployments on ECS for zero-downtime rollouts and lower release risk.
- **Infrastructure:** ran highly available, fault-tolerant ECS infrastructure defined in Terraform.
- **Application security:** integrated SHAPE protection, Rapid7 and CrowdStrike Falcon; hardened web apps with custom AWS WAF rules and IP-based API allow-listing.
- **CI/CD automation:** automated deployments through Jenkins, reducing deployment time and manual errors.

Systems Engineer

August 2017 - December 2020 · Coimbatore, India

- **Cloud redesign:** migrated workloads from public-VPC EC2 to a secure architecture with Auto Scaling, ALB and NAT Gateways, moving databases to Aurora Serverless in private subnets.
- **Containerization:** led containerization and migration to Amazon ECS for better utilization, faster scaling and streamlined deployments.
- **Backup & recovery:** implemented incremental backups to S3 with Restic for efficient storage and point-in-time recovery.
- **Cost & performance:** contributed to a 30% cost reduction through Reserved Instances and Savings Plans; improved latency for 10,000+ users with CloudFront edge caching.
